The Bowhead Whale-J.C. George 2020-09-11 The Bowhead Whale: Balaena mysticetus: Biology and Human Interactions covers bowhead biology from their anatomy and behavior, to conservation, distribution, ecology and evolution. The book also discusses the biological and physical aspects of the Arctic ecosystem in which these whales live, with careful attention paid to the dramatic changes taking place. A special section of the book describes the interactions of humans with bowheads in past and present, focusing on their importance to Indigenous communities and the challenges regarding entanglement in fishing gear, industrial noise and ship strikes. This volume brings together the knowledge of bowheads in one place for easy reference for scientists that study the species, marine mammal biologists, but, equally important, for everyone who is interested in the Arctic. Presents the only current book dedicated to this species Includes short, high-impact chapters that make it possible to review all bowhead biology in one compact volume Illustrated with never-before published photos of bowheads in their natural environment Provides a platform for an in-depth understanding of indigenous whaling

Rhodesia-Patrick O'Meara 2019-05-15 Rhodesia: Racial Conflict or Coexistence? examines the contemporary racial struggle in Rhodesia—a struggle between a controlling white minority and an African majority with little political power or influence. After providing background information on the development of racial attitudes from 1890 onward, Professor O'Meara offers a detailed treatment of current Rhodesian political parties and movements. With precision and objectivity he explains why some Africans have accepted the ground rules of the Rhodesian political system, including laws, elections, and the parliamentary structure, while others have rejected them and seek to destroy the system.

Structure and Chemistry of the Apatites and Other Calcium Orthophosphates-J.C. Elliott 2013-10-22 The apatites and related calcium phosphates have been of considerable interest to biologists, mineralogists, and inorganic and industrial chemists for many years. This book contains a detailed description of the structures and structural interrelationships of the calcium orthophosphates, including the apatites. Their preparation, crystal growth and dissolution, chemical reactions including thermal decomposition, IR, Raman and NMR spectra and various physical properties are discussed. Apatites other than those containing calcium and phosphorus are included. Synthetic, mineral and biological carbonate apatites are also considered. A wide, but critical coverage of the literature is given, which includes a substantial amount not written in English. Research from many disciplines is included which results in a comprehensive compilation of recent work.

Gender, Migration and Domestic Service-Janet Henshall Momsen 2003-09-02 This book examines a wide range of migration patterns which have arisen, and exposes the tensions and difficulties including: * legal and empowerment issues * cultural and language diversities and barriers * the impact of live-in employment. The book features case studies taken from Europe, South and North America, the Caribbean, Asia, and Africa and uses original fieldwork using quantitative and qualitative methods.
Struggle for Swazi Labour, 1890-1920-Jonathan Crush 1987-11-01 Although the results of colonial expansion have been described in other general studies of the region, this is the first book to take a close look at the case of the Swazi in Swaziland. Jonathan Crush shows that while the Swazi experienced many of the classic problems of underdevelopment, there were also a number of significant differences. For example, traditional relationships between chiefs and commoners showed much greater resilience than elsewhere. This considerably affected the pace and nature of Swaziland's incorporation into South Africa's notorious migrant labour system. As well, because of the country's proximity to a number of alternative labour markets, the Swazi had a greater choice of employment than did many other groups in the region. Crush shows how the Swazi were able to use the system to their own advantage and how this helped shape the patterns of early Swazi migrancy. The Struggle for Swazi Labour examines the changing nature of the Swazi migrant labour force, the spatial patterns and temporal rhythms of migration, and the emergence of the Witwatersrand as the dominant, though by no means exclusive, employer of Swazi labour. It also shows how the local history of white settlement and land alienation influenced the manner in which the Swazi were subordinated to foreign economic and political control. The book fills an important gap in the history of Swaziland and in the economic history of the south African region as a whole. It will be helpful to anyone wishing to understand the pre-eminence of traditional personalities and institutions in contemporary Swaziland, and to those seeking an explanation for South African economic domination of the surrounding countries. Its comparative perspective makes it valuable to a wide range of scholars with interests in the social and economic development of southern Africa, as well as to labour and social historians, rural economists, and economic geographers.

Video Games and Creativity- 2015-08-03 Video games have become an increasingly ubiquitous part of society due to the proliferation and use of mobile devices. Video Games and Creativity explores research on the relationship between video games and creativity with regard to play, learning, and game design. It answers such questions as: Can video games be used to develop or enhance creativity? Is there a place for video games in the classroom? What types of creativity are needed to develop video games? While video games can be sources of entertainment, the role of video games in the classroom has emerged as an important component of improving the education system. Mays Landing

J. C. Mercer 2016-07-25 Parkhill Mays is a third-year medical school dropout from a prestigious university who wakes up from a failed suicide attempt in Bellevue Hospital in New York City. There he meets T-Bone, a self-described "human lab rat" who takes the vulnerable Mays under his wing. Living beneath the streets of the city they make ends meet selling sperm and other body parts and as paid participants for product and pharmaceutical trials, culminating with an extended Phase III clinical trial for a new anti-depressant wonder drug. We gradually learn more about Mays' mental illness and the reasons behind his suicide attempt as he struggles to find a place between his new underground existence and the "topside" world he left, finding love and fighting his own inner demons in his quest for peace and meaning in his life.

Fynbos

Nicky Allsopp 2014-09-18 South Africa's fynbos region has intrigued biologists for centuries. It has achieved iconic status as a locus of megadiversity and therefore a place to study the ecological underpinnings of massive evolutionary radiations. Researchers have made great advances over the past two decades in unravelling the complexities of fynbos ecology and evolution, and the region has contributed significant insights into the adaptive radiations of large lineages, conservation science, pollination biology, invasive plant biology, and paleoanthropology. Lessons from the fynbos offer much of value for understanding the origin, maintenance, and conservation of diversity anywhere in the world. This book provides the first synthesis of the field for 20 years, bringing together the latest ecological and evolutionary research on the South African global biodiversity hotspots of the Greater Cape Floristic Region - the iconic fynbos and succulent karoo. It explores the historical and modern physical and biological environment of this region, the circumstances and processes which have fostered its remarkable biodiversity, and the role this diversity has played in the emergence of modern humans. It also discusses the challenges of contemporary management and conservation of the region's biodiversity in the face of accelerating global change.

Nonimaging Optics

Roland Winston 2005-01-20 From its inception nearly 30 years ago, the optical subdiscipline now referred to as nonimaging optics, has experienced dramatic growth. The term nonimaging optics is concerned with applications where imaging formation is not important but where effective and efficient collection, concentration, transport and distribution of light energy is - i.e. solar energy conversion, signal detection, illumination optics, measurement and testing. This book will incorporate the substantial developments of the past decade in this field. * Includes all substantial developments of the past decade in the rapidly moving field of nonimaging optics * The only authoritative reference on nonimaging optics, from the leader in the field.

Advanced Zeolite Science and Applications

Michael Stöcker 1994-07-19 Zeolites and related microporous materials are used in oil processing and in the fine and petrochemical industries on a large scale. New applications of zeolites contribute to environmentally friendly processes and refined zeolites such as catalytic zeolite membranes and zeolites containing exhaust-pipe reactors are being introduced. Recent diversity in zeolite research has been fueled by the increase in number of microporous materials and the combination with interfacing science areas. The possibility to accommodate ions, large molecules or nanostructures in the crystalline matrix has been explored and the performance of electronic, acoustic and photonic modified response of the materials has been tested. This volume provides up-to-date information on new zeolite and related materials and composites, their applications, testing of new processes and techniques, and promising laboratory results as well. A vast amount of work from a fundamental aspect is incorporated. In particular, the combination of science and application offers useful information for readers interested in molecular sieves.

Introduction to Zeolite Science and Practice

E.M. Flanigen 1991-02-05 Zeolites and related molecular sieves have quickly become important pathways to new opportunities in the fields of oil processing and petrochemical synthesis. The signs of intense activity in both industry and academia are evident: burgeoning papers and patent applications; increasing numbers of industrial zeolite-based processes and their rapid expansion into organic chemicals manufacturing; recent progress in zeolite accessibility range, matrix behaviour, lattice components and satellite structures; and the recognition that zeolites, which are stable and can be regenerated, may be incorporated into new, environmentally friendly processes. This volume offers a thorough, up-to-date introduction to zeolites and such related materials as crystalline aluminium phosphates and clays. Its 16 chapters, each written by specialists, provide detailed treatments of zeolite theory (including a review of major developments), zeolite laboratory and research practice, and zeolite industry applications. Students and individuals entering the field will find Introduction to Zeolite Science and Practice a thorough guidebook. Experienced researchers will appreciate its in-depth coverage of the zeolite spectrum, including the latest views on zeolite structure, characterization and applications.

Hydrotreatment and Hydrocracking of Oil Fractions

B. Delmon 1999-11-03 The 2nd International Symposium on Hydrotreatment and Hydrocracking of Oil Fractions, which is also the 7th in the series of European Workshops on Hydrotreatment, took place in Antwerpen, Belgium from November 14 to 17. The Symposium emphasized how oil refining faces increasingly severe environmental regulations. These and the increasing application of heavier crude containing more S-, N- and metal components call for more efficient hydrotreatment and hydrocracking processes. It is clear from the keynote lectures, the oral contributions and the posters of this meeting that adapting the operating conditions will not suffice. Adequate catalysts need to be developed, with different composition and structure. Surface science techniques and molecular modeling are now well established tools for such a development. They should be of help in widely different aspects, like the role of precursors
in the preparation or the modifications undergone by the catalyst under reaction conditions. The improvement of hydrotreatment and hydrocracking also needs accurate modeling of the chemical reactor. This requires more representative hydrodynamics and kinetic models whose validity extends to the very low S- and N-contents. These areas should be vigorously developed.

**Entrepreneurship in Africa** - Ven Sriram 2020-11-16 It is now widely recognized that in regions like Africa, for economic and other reasons, the public sector has had to disengage and divest from many areas of the economy and allow private enterprise, especially scalable start-ups and new ventures, to enter and flourish if economic development and employment are to grow. There is, however, a training and education gap since entrepreneurship is rarely taught formally at African universities and, when it is, it is often approached from a Western perspective which may not be appropriate given that African environments are significantly different from most Western ones in terms of economic infrastructure and political considerations. This book allows readers to understand the African entrepreneurial context by guiding them through the principal stages in the life of a new venture, and offers approaches, both Western and indigenous, that can inform their entrepreneurial actions. It concludes by examining some specialized topics, including female, youth, and social entrepreneurship, as well as real estate and technology. Exercises throughout the book will enable readers to evaluate their motivations and preparedness for entrepreneurship and learn how to communicate a new venture’s key features to potential stakeholders. By focusing on the distinctive features of entrepreneurship in the African context, and taking a conversational tone, this is an informative and practical text that will be useful for students of Global Entrepreneurship and Business as well as actual and prospective entrepreneurs in the private, non-profit, and public sectors.

**Large-Order Behaviour of Perturbation Theory** - J.C. Le Guillou 2012-12-02 This volume is concerned with the determination of the behaviour of perturbation theory at large orders in quantum mechanics and quantum field theory, and its application to the problem of summation of perturbation series. Perturbation series in quantum field theory and in many quantum mechanics models are only asymptotic and thus diverge for all values of the expansion parameter. Their behaviour at large orders provides information about whether they define the theory uniquely (the problem of Borel summability). It suggests methods to extract numerical information from the series when the expansion parameter is not small. The articles reprinted here deal with the explicit evaluation of large-order behaviour in many quantum mechanics and field theory models. The large-order behaviour is related to barrier penetration effects for unphysical values of the expansion parameter, which can be calculated by WKB or instanton methods. The calculation of critical exponents of \( \varphi^4 \) field theory is presented as a practical application.

**Carotenoids as Colorants and Vitamin A Precursors** - 2012-12-02 Carotenoids as Colorants and Vitamin A Precursors: Technological and Nutritional Applications presents the application of carotenoids to food and to the feed of animals, poultry, fish, and birds. This book discusses the use of carotenoids in medicine, in the coloring of cosmetic and pharmaceutical products, and their unique role as photocatalysts. Organized into 10 chapters, this book begins with an overview of the growing preference for natural-type colors in countries around the world. This text then examines the potential level of use of various carotenoids in a variety of foods. Other chapters consider the types of carotenoids that are added to the diet of aquatic animals, which should be selected according to the species because of varying biosynthetic capabilities and expected final pigment content. This book discusses as well the mechanisms that control the assimilation and absorption of some carotenoids. The final chapter deals with determination of vitamin A value. This book is a valuable resource for industrial chemists and aquaculturists.

**Geography and Imperialism, 1820-1940** - Morag Bell 1995 An examination of how European imperialism was facilitated and challenged from 1820 to 1920. The Handbook of Metabonomics and Metabolomics - John C. Lindon 2011-08-11 Molecular biology operates at three levels - genes, proteins and metabolites. This book is unique in that it provides a comprehensive description of an approach (metabonomics) to characterise the endogenous metabolites in a living system, complementing gene and protein studies (genomics and proteomics). These “omics” methods form the basis for understanding biology at a systems level. The Handbook of Metabonomics and Metabolomics aims to be the definitive work on the rapidly expanding subjects of metabolic profiling, metabolite and biomarker identification, encompassing the fields of metabonomics and metabolomics. It covers the principles of the subject, the analytical and statistical techniques used and the wide variety of applications.

Encyclopedia of Animal Behavior - 2019-01-21 Encyclopedia of Animal Behavior, Second Edition, the latest update since the 2010 release, builds upon the solid foundation established in the first edition. Updated sections include Host-parasite interactions, Vertebrate social behavior, and the introduction of ‘overview essays’ that boost the book’s comprehensive detail. The structure for the work is modified to accommodate a better grouping of subjects. Some chapters have been reshuffled, with section headings combined or modified. Represents a one-stop resource for scientifically reliable information on animal behavior. Provides comparative approaches, including the perspective of evolutionary biologists, physiologists, endocrinologists, neuroscientists and psychologists.

Routledge Handbook of International Family Law - Barbara Stark 2019-01-30 Globalisation, and the vast migrations of capital and labour that have accompanied it in recent decades, has transformed family law in once unimaginable ways. Families have been torn apart and new families have been created. Borders have become more porous, allowing adoptees and mail order brides to join new families and women fleeing domestic violence to escape from old ones. People of different nationalities marry, have children, and divorce, not necessarily in that order. They file suits in their respective home states or third states, demanding support, custody, and property. Otherwise law-abiding parents risk jail in desperate efforts to abduct their own children from foreign ex-spouses. The aim of this Handbook is to provide scholars, postgraduate students, judges, and practitioners with a broad but authoritative review of current research in the area of International Family Law. The contributors reflect on a range of jurisdictions and legal traditions and their approaches vary. Each chapter has a distinct subject matter and was written by an author who was invited because of his or her expertise on that subject. This volume provides a valuable contribution to emerging understandings of the subject.

Medicinal Chemistry of Anticancer Drugs - Carmen Avendano 2015-06-11 Medicinal Chemistry of Anticancer Drugs, Second Edition, provides an updated treatment from the point of view of medicinal chemistry and drug design, focusing on the mechanism of action of antitumor drugs from the molecular level, and on the relationship between chemical structure and chemical and biochemical reactivity of antitumor agents. Antitumor chemotherapy is a very active field of research, and a huge amount of information on the topic is generated every year. Cytotoxic chemotherapy is gradually being supplemented by a new generation of drugs that recognize specific targets on the surface or inside cancer cells, and resistance to antitumor drugs continues to be investigated. While these therapies are in their infancy, they hold promise of more effective therapies with fewer side effects. Although many books are available that deal with clinical aspects of cancer chemotherapy, this book provides a sorely needed update from the point of view of medicinal chemistry and drug design. Presents information in a clear and concise way using a large number of figures. Historical background provides insights on how the process of drug discovery in the anticancer field has evolved. Extensive references to primary literature.
