**Therapeutic Assessment with Adults** Francesca Fantini 2022-06-23 This book is a comprehensive guide to Therapeutic Assessment (TA) with adults, showing how to collaboratively engage clients in psychological testing to help them achieve major and long-lasting change. This guide clearly lays out each step of TA with adults, including its rationale and detailed instructions on how to handle a range of clinical situations. Additionally, in part one, the authors fully describe the development of TA, its theoretical bases, and the most up-to-date research on the model. In the second part of the book, the authors describe the structure and techniques of TA, and illustrate each step with transcripts from a clinical case. Further clinical illustrations help the reader understand how to conduct a TA with different types of clients, including those from culturally diverse backgrounds. This book is essential for all clinicians, therapists and trainers working with adult clients, along with students in assessment courses.

Multimethod evaluations of disordered thinking and perception in multiple contexts. Psychological assessment reviews a wide array of measures, strategies, and special considerations for conducting psychological assessment of disordered thinking and perception. Over the past three decades, Dr. Crisi has refined and expanded the CWS through research, broadening the scope of the measure, and increasing the accessibility of the system to clinicians. This manual provides a comprehensive guide to the CWS, made available to English-speaking clinicians for the first time.

The CWS is a semi-structured, graphic, performance-based personality test, created by Enrico Wartegg (1939). With a foundation in Gestalt and Psychodynamic theory, the WDC has been used widely throughout Europe, South America, and Japan, but only recently has become available in the United States. Initial scoring systems for the WDC were considered cumbersome and lacked research-driven validation. In response to these factors, Alessandro Crisi, following years of clinical practice and research, developed the CWS Wartegg System (CWS, 1998, 2007), a normed and standardized administration, scoring, and interpretation system for the WDC. This book goes beyond the debate to explore the nature of cognition and to draw out implications for the study of neuroscience will find The Case for Mental Imagery to be an invaluable resource for understanding not only the imagery representations arise from neural processes. To support this theory, they seamlessly weave together conceptual analyses and the many varied empirical findings from cognitive psychology and neuroscience. In doing so, they present the conceptual grounds for positing this type of internal representation and summarize and refute arguments to the contrary. Their argument also serves as a historical review of the imagery debate from its earliest inception to its most recent phases, and provides ample evidence that significant progress has been made in our understanding of mental imagery. In illustrating how scientists think about one of the most difficult problems in psychology and neuroscience, this book goes beyond the debate to explore the nature of cognition and to draw out implications for the study of consciousness. Student and professional researchers in vision science, cognitive psychology, philosophy, and neuroscience will find the Case for Mental Imagery to be an invaluable resource for understanding not only the imagery debate, but also and more broadly, the nature of thought, and how theory and research shape the evolution of scientific debates.

Therapeutic Assessment with Children

Deborah J. Tharinger 2022-03-18 Therapeutic Assessment with Children presents a ground-breaking paradigm of psychological assessment in which children and families collaborate with the psychologist to understand persistent problems and find new ways of repairing their relationships and moving forward with their lives. This paradigm is systemic, client-centered, and culturally sensitive and is applicable to families from many different backgrounds who often feel misunderstood and disempowered by traditional assessment methods. In this book, the reader will find a step-by-step description of Therapeutic Assessment with Children (TA-C), with ample teaching examples to make each step come alive. Each chapter includes detailed transcripts of assessment sessions with Henry, a ten-year-old boy, and his parents as they progress through a Therapeutic Assessment and find new ways of appreciating each other and being together. The combination of didactic and clinical material will give even new clinicians a groundwork from which to begin to practice TA-C. The volume demonstrates how the core values of TA-C—collaboration, respect, humility, compassion, openness, and curiosity—can be embedded in psychological assessment with children and families. Therapeutic Assessment with Children will be invaluable for graduate assessment courses in clinical, counseling, and school psychology and for seasoned professionals wanting to learn the TA-C model.

Marketing Research Methods

Mercedes Estebar Bravo 2021-01-31 Covering both quantitative and qualitative methods, this book examines the breadth of modern market research methods for upper level students across business schools and social science faculties. Modern and trending topics including social networks, machine learning, big data, and artificial intelligence are addressed and real world examples and case studies illustrate the application of the methods. This text examines potential problems, such as researcher bias, and discusses effective solutions in the preparation of research reports and papers, and oral presentations. Assuming no prior knowledge of statistics or econometrics, discrete chapters offer a clear introduction to both, opening up the quantitative methods to all students. Each chapter contains rigorous academic theory, including a synthesis of the recent literature as well as key historical references, applied contextualization and recent research results, making it an excellent resource for practitioners. Online resources include extensive chapter bibliographies, lecture slides, an instructor guide and extra extension material and questions.
